## Short description of the business

We supply ingredients, equipment and technology to chefs and businesses within East Anglia and surrounding counties in our own fleet of vehicles. We work with chefs sharing knowledge and products both locally and internationally. We also have a dedicated domestic arm of our businesses for our local region. Our website delivers all over the world.

## Environmental highlights

Reducing our utility costs with increasing operational efficiency and seeing direct results of our strategies and efforts. Watching our team embrace ecology and also sharing with it both in professional and personal capacities.

**Green credentials** - Suffolk Carbon Silver Award

## A summary of environmental achievements

Reduced utility costs, reduced fleet costs in fuel and maintenance. Decreasing land fill waste collections and tripling our recyclable waste collections. Sharing knowledge with our customers through supporting local producers and reducing food miles. Growing our team's awareness of working efficiently and being mindful of excess waste through policies and procedures.

## Personal testimony

We have benefited financially as a business through savings and even more so the positive effect of such activities has also given the team a feel good factor of working towards strategic goals for a greener environment.

## Key lessons

Advice we received from local groups helped massively. Wish we had done this sooner as the positive impact it has had across many levels of the business and not just financial.

## Where did I get my advice?

Louise and the team at Groundwork Suffolk helped immensely and we thank them.
